Our new Sunwebcam™ Wifi Security Floodlight Camera offers a self-contained photo sensor activated flood light with Wifi IP camera, without the look of a bulky traditional CCTV camera. With this outdoor camera you have a completely self-contained video recording solution and allow monitoring remotely through cell phone or PC. Video is recorded directly to the integrated Micro SD card recorder. The light is installed like any traditional flood light, with only 1 wire to connect the power supply. There are no cables to run or additional equipment required such as a DVR.

Even though security is important for everyone, not everyone can pay hundreds or even thousands of dollars for an expensive professionally installed security system for their home or business.

Using a combination of light and video, Sunwebcam™, a self-contained photo sensor activated flood light with Wifi IP Security Camera, is a unique and exciting security solution that costs a fraction of the price of a traditional security system.
